

The DIAVASO Mobile Application Suite

DIAVASO Essential

Your entry into the world of DIAVASO. Locate, read and health-check your meters remotely.

DIAVASO Collection Mobile

The heart of the system: DIAVASO Collection Mobile is an extensive readout and workflow manager for walk-by/drive-by and stationary operations.

DIAVASO Collection Station

The perfect solution for simple walk by/drive-by meter reading and small-scale fixed networks.

DIAVASO Data Logger

Access data logger information for in-depth analysis and easy data import & export.

DIAVASO Configuration and Service

The comprehensive readout and configuration tool for installers and service technicians.

DIAVASO

YOUR METERING MULTITOOL

Read Beyond the Surface

The DIAVASO suite is more than just software. It is a clever system that supports your meter reading with fast and easy mobile solutions. DIAVASO consists of five individual apps which can be used separately or in combination, depending on your requirements for remote meter reading (AMR) or small-scale fixed network (AMI).

The DIAVASO apps provide all the features and capabilities you need to read and manage your meters as efficiently as possible. The apps run on Android devices and communicate with the SensusRF radio transceiver SIRT (Sensus Interface Radio Tool) as well

as wireless M-Bus capable third-party meters to provide meter installation, remote reading, maintenance and the configuration of meters and repeaters.

The Collection Mobile app includes a server-based interface (web portal) for managing the meter reading workflow, reporting as well as data exchange with the billing system. For customers who want to start the digital journey, DIAVASO Essential is the right app to get „smart ready“, offering basic functionality to locate, read and health check your meters.

SensusRF – License Free Radio

SensusRF is an advanced radio communication system for retrieving data from meter endpoints and providing it for further processing and analysis. It offers a pathway

to upgrade from mobile reading in walk-by/drive-by systems, to fixed infrastructure for remote reading of end points, without any changes required.

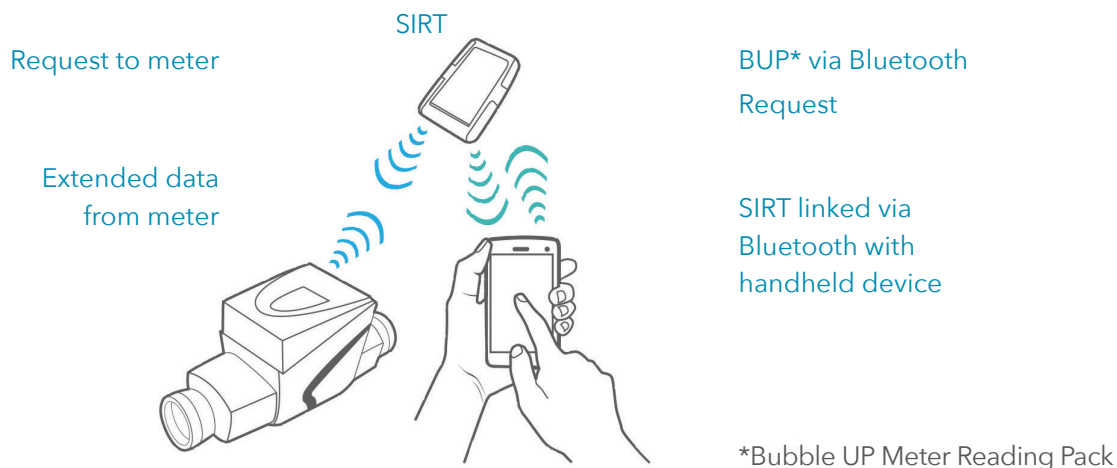

SIRT – Mobile Communication Solution

With DIAVASO it is easy to support a mixed deployment of SensusRF and M-Bus using one common set of tools and apps - ensuring greater efficiency. The Sensus Interface Radio Tool (SIRT) is your link between the DIAVASO apps and all SensusRF enabled meters as well as wireless M-Bus capable third-party meters.

The long-lasting battery-powered radio modem connects to the handheld device running DIAVASO via Bluetooth.

It provides two internal antennas to forward radio messages from the strongest signal received (antenna diversity capability).

Uni- and bidirectional Communication

High Data Security

All sensitive data is encrypted and protected against unauthorized access. Different hosting- and server-options are available. The communication of all sensitive data between DIAVASO end

devices and the data center is protected against unauthorized access, taking into account internationally agreed and common best practice recommendations.

Built for a smarter water network

SensusRF-compatible meters in combination with SIRT and DIAVASO enable you to manage distribution networks much more efficiently, providing accurate and reliable data, whatever the installation and environmental conditions. With the multiple communication options, you can easily migrate from a walk-by/drive-by AMR systems to a fixed network AMI solution for near real time data communication.

Complementary Products

DIAVASO works perfectly with the Sensus product range. Connect it to commercial & industrial meters, thermal energy, meters or residential meters. DIAVASO supports any third-party meters that use wireless M-Bus.

iPERL®
Solid-state water meter

640C/640MC Mechanical water meter with eRegister, available in compo-site and brass body

MeiStreamRF®
Commercial and industrial water meter with electronic register

Cordonel®
Solid-state commercial and industrial water meter

Benefits

User-friendly, modular apps for an improved meter reading workflow

Data security and compliance with international standards

Easy management of walk-by/drive-by and stationary meter reading

No infrastructure or configuration required – simply download the apps

Simultaneous and secure meter reading even of inaccessible end points

Each app is available in 16 languages and can be used independently

Alarm function with leakage-, tampering- and backflow-detection

Works with most Android smartphones and tablets
